MISSISSIPPI

ASC PROGRAMS

AGRICULTURAL STABILIZATION
AND CONSERVATION

FOREWORD

This annual report brings together in statistical form the more important data concerning the operation of ASC programs in Mississippi and shows the achievements in 1956 of the ASC State, county, and community committees in the administration of the Agricultural Conservation Program, Marketing Quota Program, Price Support Program, Soil Bank Program, and Farm Storage Facility Loan Program. These ASC programs have directly or indirectly affected all of the farmers and farm lands in Mississippi. The results have not been evident in better soils, increased production, and more prosperity to farmers only, but have also benefited the business men and the consuming public. These achievements will have lasting benefits as good and sound investments in the welfare of the Nation.

Any further detailed information desired may be obtained from the ASC State Office, Jackson, Mississippi, or ASC county offices.

Mississippi State ASC Committee

James N. Lipscomb, Chairman

James R. Flautt, Member

Ethan A. Porter, Member

Clay Lyle, Director of Extension

Date of Issue

July 1957

PART I

AGRICULTURAL CONSERVATION PROGRAM

The Agricultural Conservation Program is authorized by the Congress to advance the over-all conservation accomplishment of the nation. Through this program the Federal Government offers to share with farmers the cost of conservation practices which individual farmers would not carry out to the needed extent on their own initiative and with their own resources. In most instances farmers pay about 50 percent of the cost of establishing practices.

The State Agricultural Conservation Program is developed by the State Agricultural Stabilization and Conservation Committee (including State Director of Extension), the State Conservationist of the Soil Conservation Service, and the State Forest Supervisor of the U. S. Forest Service in accordance with the provisions of the National Bulletin. In the development of the State ACP, consideration is given to recommendations of county ASC committees and other groups having an interest in agriculture. The program is administered by county ASC committees under the supervision of the State ASC Committee. Technical assistance for engineering and forestry practices is provided by Soil Conservation Service and Forest Service.

Any landlord, tenant, or share cropper on a farm is eligible to participate in the Agricultural Conservation Program. These persons may request the Federal Government to share the cost of establishing eligible conservation practices. Such requests must be filed with the county ASC committee for the county in which the farm records are located before performance of the practice is started.

In addition to conservation practices carried out on individual farms, pooling agreements were used in some counties to meet the needs of more than one farm. Under these agreements farmers cooperated in carrying out conservation practices affecting them as a group. The agreements were approved by the county ASC committee before the practices were started, and the completed practices were checked to determine that they met performance requirements.

The following pages summarize the achievements of the 1956 ACP.

STATE SUMMARY OF NUMBER OF FARMS USING EACH PRACTICE AND AMOUNT OF ASSISTANCE UNDER THE AGRICULTURAL CONSERVATION PROGRAM, 1956

Practice Number and Description	Amount of ACP Assistance (Dollars)	Number of Farms Using Practice	Percent of Total ACP Assistance Used for Practice
Total	6,452,964	40,426	100.00
A-2 Initial establishment of a permanent vegetative cover for soil protection or as a needed land-use adjustment	1,494,301	7,154	23.17
A-3 Establishment of additional acreages of vegetative cover in a crop rotation	267,349	1,326	4.14
A-4 Initial treatment of farm land by the application of liming materials	717,757	3,852	11.12
A-7 Initial establishment of a stand of trees	178,258	2,234	2.76
B-1 Initial improvement of an established permanent vegetative cover for soil or watershed protection	1,567,705	5,963	24.30
B-7 Construction of a pond for livestock water	274,470	2,475	4.24
B-9 Construction of permanent fences	9,187	95	.14
B-10 Initial improvement of a stand of forest trees	342,813	1,886	5.31
C-1 Establishing permanent sod waterways	2,317	53	.04
C-2 Initial establishment of permanent vegetation as protection against erosion	651	14	.01
C-4 Constructing terraces	10,660	184	.17
C-5 Constructing diversion terraces	18,284	156	.28
C-6 Construction of a pond for erosion control	44,049	185	.68

STATE SUMMARY OF NUMBER OF FARMS USING EACH PRACTICE AND AMOUNT OF ASSISTANCE UNDER THE AGRICULTURAL CONSERVATION PROGRAM, 1956
-- Continued

Practice Number and Description	Amount of ACP Assistance (Dollars)	Number of Farms Using Practice	Percent of Total ACP Assistance Used for Practice
C-8 Channel clearance, enlargement, or realignment	34,657	112	.54
C-9A, C-9B, and C-9C Construction of permanent ditches, flat V-ditches, and W-ditches	94,633	639	1.47
D-1 Establishment of vegetative cover for winter protection from erosion	1,009,512	10,436	15.64
D-2 Establishment of vegetative cover for summer protection from erosion	365,697	3,601	5.67
F-1(1) (Special practice) Construction of open flumes in gullies. (C-7)	710	9	.01
F-1(2) (Special practice) Construction of wells for livestock water. (B-5)	5,438	32	.08
F-1(3) (Special practice) Construction of a pond to impound surface water water for irrigation. (C-14)	5,248	9	.08
F-1(4) (Special practice) Sealing ponds for livestock water as a means of protecting established vegetative cover. (B-7)	15	1	-
F-1(5) (Special practice) Shaping or grading land to permit effective surface drainage. (C-11)	9,253	10	.14

PART II

ACREAGE ALLOTMENTS AND MARKETING QUOTA PROGRAMS

The Agricultural Adjustment Act of 1938, as Amended, is being continued for the purpose of conserving natural resources, preventing the wasteful use of soil fertility, and of preserving, maintaining, and rebuilding farmland resources. To accomplish these purposes, the Act provides for assistance in the marketing of agricultural commodities for domestic consumption and for export and to regulate interstate and foreign commerce in the commodities to the extent necessary to provide an orderly, adequate, and balanced flow of such commodities in the interstate and foreign commerce through storage of reserve supplies, loans, and marketing quotas.

The quantity of the commodities needed is usually referred to as the National marketing quota which is converted into acres by dividing the normal yield of the commodity into the National marketing quota.

Marketing quotas come into operation whenever the Secretary of Agriculture proclaims marketing quotas and two-thirds of the eligible producers voting in a referendum favor quotas. Therefore, marketing quotas become operative at the discretion of interested producers.

In 1956 acreage allotments and marketing quotas were in effect in Mississippi on cotton, rice, and peanuts. The farmers of Mississippi overwhelmingly approved the proclamation of marketing quotas for these commodities in respective referendums. The following tables will show information by counties regarding the allotment programs for cotton, rice, and peanuts.

PART III

PRICE SUPPORT AND STORAGE FACILITY LOANS

Price Support Programs:

Price support operations are carried on in the State of Mississippi through the State and county ASC committees acting as agents for Commodity Credit Corporation. The purpose of these programs is to establish price minimums or floors for a number of agricultural commodities. Levels of support for 1956 were directed or authorized by the Agricultural Act of 1949. Supports for corn, cotton, wheat, rice, tobacco, and peanuts - the basic commodities - are mandatory. Supports are also mandatory for certain designated nonbasic commodities - wool, tung oil, honey, milk, and butter fat.

The Agricultural Act of 1949 authorizes prices of commodities to be supported by means of loans and purchase agreements. In conducting price support operations, Commodity Credit Corporation through ASC committees uses the usual and customary channels, facilities, and arrangements of trade and commerce to the maximum extent practicable and consistent with the fulfillment of its purposes.

Prices of most storable commodities such as oats, rice, and soybeans, are supported by means of nonrecourse loans to eligible producers. Loans are made on eligible commodities stored in approved farm storage facilities or in public warehouses approved under Uniform Storage Agreements. Loans may be obtained from approved lending agencies, including banks, or direct from the ASC county committee of the county in which the farm is located. Commodities placed under loan may be redeemed by repaying the principal amount of the loan plus $3\frac{1}{2}\%$ interest. The borrower has the option of redeeming the commodity any time prior to maturity date of the note.

Since price support loans are nonrecourse, a producer can deliver the commodity at maturity in full satisfaction of the loan regardless of the market price of the commodity. However, the commodity at maturity must be of the same quality and quantity as that on which the loan was made. When loans are not redeemed, the producer is not required to pay interest.

Producers may obtain price support by executing a purchase agreement. Agreements are available in the same period which loans are available. Under a purchase agreement an eligible producer enters into an agreement with Commodity Credit Corporation in which CCC agrees to buy from him, at the support price, on the same date that loans mature, at the farmer's option, a quantity of the commodity not in excess of the total quantity specified in the purchase agreement. The producer is under no obligation to deliver any specified quantity. CCC is obligated to purchase up to the maximum quality specified in the agreement provided the commodity meets eligibility requirements.

The purchase agreement in effect gives the farmer the same degree of price support protection as a loan without requiring him to execute loan documents, pay interest on redemptions, or storing the commodity in approved storage. It generally is used by those farmers who can wait from harvest time until the delivery date to obtain price support proceeds.

A summary of commodity Price support activities in the State of Mississippi for commodities produced in 1956 will be found on the following tables.

Farm Storage Facility and Equipment Loan Programs:

The farm storage facility and equipment loan programs were established June 15, 1949, to provide increased farm storage facilities and drying equipment used in handling farm commodities. Funds of Commodity Credit Corporation are available for recourse loans to producers to finance construction or purchase of new farm storage facilities or dryers. The programs are administered by ASC county committees under the supervision of the ASC State Committee.

Farmers may borrow up to 80% of the f.o.b. warehouse cost of new storage facilities and 50% of the f.o.b. warehouse cost of dryers. Loans on storage facilities are payable in 4 equal installments, the first being payable 12 months from the date of disbursement. The dryer loans are repayable in 3 equal installments, the first being payable 12 months from the date of disbursement. The rate of interest on both loans is 4% per annum. Any farm owner, operator, or tenant is eligible to participate in the programs. Loans may be obtained to build storage for corn, oats, rye, barley, soybeans, grain sorghum, rice, cottonseed, and winter cover crop seed. Applications for loan are filed with the ASC county committee in the county in which the farm is located.

A summary by counties showing loans disbursed and repaid under these programs since June 15, 1949, appears in the following pages.

PART IV

SOIL BANK

Public Law 540, cited as the "Agricultural Act of 1956" and Title I thereof, cited as the "Soil Bank Act," was passed by the 84th Congress and signed into law by the President on May 28, 1956.

In announcing the initial participation requirements for the Soil Bank Program on June 8, 1956, Secretary Benson said: "We have proceeded with all possible haste since enactment of the Soil Bank legislation to present a sound 1956 program to farmers. It is true, however, that the program for this year is in a sense a special program designed to meet the time limitations and the requirements of the legislation for 1956. For that reason, 1956 will not present a fair trial of what the program can accomplish. Before next year's crops are planted, however, we will have an opportunity to plan and develop a more comprehensive program."

The Soil Bank Act provides for two separate programs:

(1) The ACREAGE RESERVE PROGRAM, designed to assist farmers in diverting a portion of their cropland from the production of excessive supplies of cotton, corn, rice, wheat, peanuts and tobacco by compensating them for reducing their acreages below their farm acreage allotments or their Soil Bank corn base.

(2) The CONSERVATION RESERVE PROGRAM, designed to assist farmers in diverting part of their cropland from the production of excessive supplies of agricultural commodities and to carry out a program of soil-, water-, forest-, and wildlife conservation.

PART IV

SOIL BANK
ACREAGE RESERVE PROGRAM

In Mississippi the Acreage Reserve Program was applicable as it related to farm allotments for cotton, rice, and peanuts. Yield groups and farm payment rates per acre were established by county and community committees on the basis of 15¢ per pound for cotton, $2.25 per cwt. for rice and 3¢ per pound for peanuts. County committees were authorized on June 25, 1956, to begin entering into agreements with farmers, such agreements to terminate December 31, 1956. Upon signing an agreement farmers agreed, among other things, to reduce the acreage of cotton, rice or peanuts below the allotment of the crop for their farm. This was accomplished by the farmer either destroying an acreage of the crop already planted or by certifying that an acreage less than the allotment was planted due to anticipation of the Acreage Reserve Program or due to adverse weather conditions.

A total of 3,135 agreements covering 14,907.7 acres in 81 of the 82 counties were signed up and farmers were paid nearly 3/4 million dollars for carrying out the terms of their agreements.

COTTON

Total farms participating	3,101
Total acres in Acreage Reserve	13,280.7
Total compensation	$667,811.21
Total acres in Acreage Reserve destroyed	7,434.4 - 56%
Total acres in Acreage Reserve underplanted	5,846.3 - 44%
Total compensation for destroyed	$371,587.35 - 56%
Total compensation for underplanted	$296,223.86 - 44%
Average rate per acre	$50.28 or 335 lbs. per acre
Average rate per acre for destroyed	$49.98 or 333 lbs. per acre
Average rate per acre for underplanted	$50.67 or 338 lbs. per acre

State Acreage Reserve was .8% of the 1956 State Allotment.

RICE

Total farms participating	39
Total acres in the Acreage Reserve	1,624.2
Total compensation	$81,517.25
Total acres in Acreage Reserve destroyed	1,156.6 - 71%
Total acres in Acreage Reserve underplanted	467.6 - 29%
Total compensation for destroyed	$57,408.37 - 70%
Total compensation for underplanted	$24,108.88 - 30%
Average rate per acre	$50.19 or 223 cwt. per acre
Average rate per acre destroyed	$49.64 or 221 cwt. per acre
Average rate per acre underplanted	$51.56 or 229 cwt. per acre

State Acreage Reserve was 3.5% of the 1956 State Allotment

PEANUTS

1 county - Neshoba

SOIL BANK
CONSERVATION RESERVE PROGRAM

The State average payment rate as established by the Soil Bank Division, CSS, in Washington was $10 per acre. The State Committee with the assistance of representatives of other agricultural agencies and the State Land Grant College established county payment rates using as a guide (a) the cash value of land for the production of crops customarily grown in the county, (b) the prevailing rates for cash rentals of such land, and (c) the productivity of land in the county as compared with land in other counties. Payment rates per acre ranged from a low of $8.50 per acre in counties in the Coastal Plains and Tishomingo County to a high of $11.50 per acre for Delta counties. Those counties bordering on the eastern edge of the Delta and along the Mississippi River were set at $10.50 per acre with the remaining counties in the State set at $9.50 per acre. The weighted average of the rate per acre times the cropland for each county resulted in a State average of $10 per acre.

County committees were authorized to begin executing 3, 5 and 10 year contracts on September 17, 1956, and the final date for entering into contracts was November 30, 1956.

A very comprehensive informational program was conducted throughout the sign-up period; however, as was indicated by the Secretary, it was too late in the program year when the Conservation Reserve Program was made available and most interested farmers were unable to participate because the cropland on their farms had either produced a crop or had been grazed during the calendar year 1956. There was limited participation in 45 of the 82 counties as indicated in the following table.
